Summary

Forward Deployed Engineer with 4+ years of experience shipping production AI systems and enterprise integrations. At Alaris, own autonomous cybersecurity agents end to end: customer discovery, architecture, deployment and production operations, cutting triage time 70% and inference cost 80%. Embed directly with customers to turn ambiguous requirements into production systems they rely on.

Experience

Alaris Security, Inc. — AI Cybersecurity Startup San Francisco
Forward Deployed Engineer (FDE) *Jan 2026 – Present*

- Own zero-to-one autonomous cybersecurity agent framework from discovery to production, embedding directly with customer CISOs and SOC leads to convert pilot feedback into **$500K+** of operational savings.
- Accelerated alert triage by **70%** (22 min to under 6) with autonomous investigation agents, so analysts contain attacks while unfolding, not after damage.
- Slashed inference cost **80%** to under **$2**/investigation via prompt caching and context compression, making always-on triage affordable at scale.
- Eliminated **86%** of duplicate investigations via entity-aware LLM clustering and PostgreSQL similarity retrieval.
- Reduced agent-fault errors from **14.3%** to **0.5%** via schema hardening and bounded recovery, earning trust for analyst-approved autonomy.
- Built and extended **3** SIEM/EDR integrations (**Sentinel, SentinelOne, CrowdStrike**), plugging customer telemetry into AI investigations with no rip-and-replace.
- Cut customer onboarding from days to hours without custom engineering: configurable onboarding turns each customer's rules and memory into investigation policies and autonomy settings.

Knex LLC (Oracle Partner) Mountain View
AI Product Engineering Intern *Jun 2025 – Aug 2025*

- Cut manual legal review **90%** shipping an LLM lease-abstraction API (**FastAPI**) converting leases to structured JSON.
- Built production **RAG** chatbot over thousands of legal documents with sub-**200ms** retrieval latency via tuned retrieval.

Deutsche Bank: Technology, Data and Innovation (TDI)
Software Development Engineer II *Jul 2021 – Jul 2024*

- Scaled a customer master-data platform to **5M+** profiles, migrating a legacy monolith to **Kubernetes** microservices on **OpenShift** and **GCP**.
- Reduced customer-data lookup from **15s to 5s** with a **Spring Boot** search service, speeding up compliance and operations reviews.
- Cut risk-analyst queries **8s to 2s** with **Kafka** and **Elasticsearch** pipelines over **17M** records/day.
- Decreased integration failures **70%** with **Kafka** pipelines across seven compliance services, making automated checks reliable.
- Dropped critical lookups from **30s to 1s** with a distributed **Hazelcast** cache, eliminating manual overrides for reviewers.
- Improved response times **40%** for **2M+** users by optimizing **Oracle 19c** queries and connection pooling.

Education

Carnegie Mellon University
M.S. in Computer Software Engineering, GPA 4.0/4.0 *Aug 2024 – Dec 2025*

PSG College of Technology
B.Tech in Information Technology, GPA 8.81/10.0 *Aug 2017 – May 2021*

Technical Skills

AI & LLM: Mastra, Vercel AI SDK, LiteLLM, LangChain, MCP SDK, Claude, OpenAI APIs; agent orchestration, tool calling, RAG, vector DBs, prompt/context engineering, eval harnesses, guardrails, cost and latency optimization
Languages: TypeScript, JavaScript, Python, SQL, Java, C++, Kotlin, Shell
Full-Stack: React, Next.js, Node.js, Spring Boot, FastAPI, REST, gRPC, WebSockets, MCP, microservices
Data: PostgreSQL (pg_trgm, row-level security), Oracle 19c, Elasticsearch, Redis, Dragonfly, Kafka
Infra & DevOps: GCP, AWS, Kubernetes, OpenShift, work queues, idempotency, OpenTelemetry, Langfuse, CI/CD (Jenkins, GitHub Actions); Sentinel, SentinelOne, CrowdStrike integrations
